SUMMARY

Software Engineer with 2 years of experience supporting and building production, database-driven applications (MariaDB, PostgreSQL, SQL) using Python, FastAPI, Django, and Frappe/ERPNext. Skilled at debugging unfamiliar codebases to find root causes, integrating third-party and payment systems, and working directly with clients across time zones, from requirements gathering through go-live and post-launch production support.

SKILLS

Databases: MariaDB, PostgreSQL, SQL (schema design, data integrity/validation, query debugging)
Backend & Languages: Python, JavaScript, C, C++, FastAPI, Django, Frappe/ERPNext, REST APIs, Asynchronous Processing (Redis/arq)
Infrastructure & Tools: Docker, Linux, Git, GitHub
Customer Support & Delivery: Requirements gathering, cross-timezone client communication, production troubleshooting, post-go-live support, root-cause debugging
Integrations: Payment gateways (Fonepay), biometric systems, LLM APIs, cross-system data synchronization

EXPERIENCE

Python Software Engineer | Sajeelo Infotech (Freelance) *May 2026 - Jun 2026*

- Diagnosed cross-system data-sync failures and root-caused inconsistencies while architecting and deploying 10+ production Python REST APIs with JavaScript-driven synchronization pipelines, cutting manual data entry by approximately 50%.
- Built and supported a production Vehicle Management System covering service tracking, spare-parts management, billing, scheduling, and customer service operations.

Software Engineer | Raindrop Inc. Pvt. Ltd. *Sep 2024 - Apr 2026*

- Acted as primary technical point of contact for a construction-industry client, leading the end-to-end ERPNext implementation (5+ modules: procurement, Letter of Credit, labor tracking, project management) from requirements gathering through go-live and ongoing post-launch production support.
- Debugged and resolved integration failures while connecting the Fonepay payment gateway via Python REST APIs, eliminating manual payment reconciliation for the finance team.
- Troubleshot biometric hardware sync issues and automated attendance capture for 60+ employees, removing roughly 4 hours per week of manual, error-prone syncing.
- Root-caused and fixed data-integrity issues across 20+ ERP models while shipping Python/JavaScript customizations, including BOQ-to-invoice automation and schedule-based billing logic.

Frappe Developer | Remote (Egypt-based company; client based in Saudi Arabia) *Aug 2025 - Jan 2026*

- Served as direct client liaison across two time zones, gathering requirements and providing ongoing support to deliver a production spa/service ERP.
- Designed and implemented 5+ custom DocTypes for booking and scheduling, debugging and reducing scheduling errors by approximately 40%.
- Built and supported an ecommerce module handling 100+ product listings and end-to-end online ordering workflows.

PROJECTS

SnapLedger - AI-Powered Receipt Intelligence API | GitHub Repository

- Built a FastAPI service using Google Gemini Vision to extract structured data from receipt images, with asynchronous Redis/arq processing and REST APIs for upload, processing, and retrieval.

ERPNext Copilot - LLM Agent | GitHub Repository

- Built an LLM agent translating natural language into structured ERPNext API calls, with a confirmation-gated architecture and role-based execution to safeguard write operations.

Budget Buddy - Django Expense Tracker | GitHub Repository

- Built a Django expense tracker on PostgreSQL with Google OAuth and a reporting dashboard, including schema design and query logic for aggregated reporting.

Letter of Credit Module - ERPNext/Frappe (Open Source) | GitHub Repository

- Open-source contribution: built a Frappe module managing the full Letter of Credit lifecycle from issuance and bank-limit validation to payment synchronization, debugging edge cases to reduce LC tracking errors to near zero.

EDUCATION

Bachelor of Science in Computer Science and Information Technology | Bhaktapur Multiple Campus | 2025
